Question 1

Correct

Mark 1.00 out of 1.00

The only property that an action object is required to have is **type**.

Select one:

☒ True ✓

☐ False

Correct. While actions will most often have another property or properties that contain a payload of information to be delivered to the store, an action is not required to have any other property but type.

The correct answer is 'True'.

## Question 2

Correct

Mark 1.00 out of 1.00

What is contained in a fetch response's `.ok` property?

Select one:

- ☐ a. A Boolean value, true or false, depending on whether the promise returned from the fetch call was resolved or rejected.
- ☐ b. The HTTP status code of the response.
- ☒ c. A Boolean value, true or false, depending on the HTTP status code of the response.  Correct. It will contain the Boolean value **true** if the promise response contained an HTTP status code signalling successful handling of the request, and false otherwise.
- ☐ d. The value returned by a successfully resolved promise's `resolve()` function.

Your answer is correct.

The correct answer is: A Boolean value, true or false, depending on the HTTP status code of the response.

Question **3**

Correct

Mark 1.00 out of 1.00

One major difference between SOAP and REST is that SOAP can only use **XML** for its message format, and REST can only use **JSON**.

Select one:

☐ True

☒ False 

Correct. SOAP can only use XML, but REST is capable of using not only JSON but XML and other formats.

The correct answer is 'False'.

## Question 4

Incorrect

Mark 0.00 out of 1.00

To configure a React component to dispatch a Redux action, you:

Select one:

- ☐ a. nest the component inside a <Provider> component
- ☐ b. include the action or action creator in the mapDispatchToProps object of the component
- ☒ c. call the action creator function that dispatches the action
- ☐ d. use the dispatch() function

✗ Incorrect.

Your answer is incorrect.

The correct answer is: include the action or action creator in the mapDispatchToProps object of the component

## Question 5

Correct

Mark 1.00 out of 1.00

The **JSON.stringify()** method in JavaScript will convert a JavaScript to JSON. The **.json()** method that can be used on the body of the **response** object from the Fetch API will convert JSON into JavaScript.

Select one:

☒ True ✓☐ False

Correct!

The correct answer is 'True'.
